

Survey cosmology in the multimessenger era.

Tuesday, 17 March, 2020

Webcast 16:00 h

Hiranya Peiris (UCL & Oskar Klein Centre Stockholm)

We are entering a transformative period in observational cosmology. Large surveys in the next few years promise to solve key problems in cosmology – but only if we develop new approaches for handling the volume and complexity of data. I will present the promise and the challenges of the coming era of surveys, and what we can hope to learn about fundamental physics.
