

# Naturalness & Self-Organised Localisation.

Tuesday, 17 May, 2022

Webcast 16:00 h

**Gian Giudice (CERN)**

The LHC is radically reshaping our ideas on physics at the TeV scale and the role of naturalness. I will discuss the current perspective on naturalness and present a new approach in which particle-physics parameters are determined by critical points of quantum phase transitions in the early Universe.
