

Evidence Depends on Criticism of Evidence – On the Logic of Research.

Tuesday, 11 October, 2022
Auditorium & Webcast 15:45 h

Prof. em. Dr. Bazon Brock
(Bergische Universität Wuppertal / Denkerei mobil Berlin)

Criticism of evidence became fundamental for scientists since they know, they can't trust their own natural ability of perception. They are aware of the fact, that humans have to pay for the tremendous adaptivity of their brain by deceptiveness. But the criticism of the naive experience of evidence must become evident on its part, so for example deflections of a pointer must be converted into sequences of numbers. Thus, abstraction is made from tempting symbols and images of desire: Abstraction became the main achievement of criticism of evidence as evidence.

Please note: This is a HYBRID colloquium!
